

Roll-on Anti-perspirant

Patented formula, protects for 3 days!
THE SWEAT AND SMELL SOLUTION

Why do we sweat?

Perspiration is a natural and essential process which regulates the body's temperature. However, for a surprising number of men and women, perspiration can become an embarrassing problem, especially during moments of stress or in hot weather!

Why does perspiration smell?

Perspiration as such does not smell regardless of which type of sweat gland it comes from. However, when the perspiration begins to decompose, which happens quite quickly, it begins to smell unpleasant and causes what we call "body odour".

How can PerspireX help?

PerspireX Roll-On is a remarkably efficacious product that will provide the solution to problem wetness and odour when ordinary anti-perspirants are just not enough. It needs to be used only 2 to 3 times a week for complete protection. Shower, bath and swim as usual...your protection will remain under control. It is fragrance free, and one pack is sufficient for about 3 months' regular use.

How does PerspireX work?

PerspireX contains an ingredient which "seals" the sweat glands, of which there are 25,000 in the underarm! The glands then remain "sealed", and become temporarily "inactive". Once you have been using the product for about 3 days, you will find wetness and odour is under control. When this has been achieved, PerspireX should be applied only 2 to 3 times a week.

Will PerspireX cause irritation?

PerspireX Roll-On is highly efficacious, however the ingredients that enable it to be so effective in controlling wetness and odour can sometimes cause irritation, especially if you do not follow the instructions carefully.

As the underarms tend to be sensitive, PerspireX Roll-On has a patented formula (Patent No: 1,331,147) which helps avoid irritation and staining of clothing.

Out on the town before...

...and after PerspireX

Instructions for Use

Apply PerspireX at night before going to bed as the sweat glands are much less active during sleep. The treated area must be **completely** dry before application and must be free from any cuts or abrasions. Do not use for 48 hours after underarm shaving.

Using the special roll-on applicator, apply PerspireX and allow to dry in the air. If necessary, use a hair dryer on cool setting to make sure the skin is completely dry! It is

the best way to ensure there is no moisture left on the skin that may cause irritation.

Wash off the following morning with mild soap and water. Do not re-apply, as this is unnecessary. Although this may seem strange – don't worry, you won't need any protection other than PerspireX – even after you have washed it off in the morning as instructed!

Do not use any other anti-perspirant or deodorant.

Isn't it unwise to block the pores?

Your body has between 2 – 3 million sweat glands and can function healthily as long as you do not cover more than 10% of these glands. Therefore, to block a few thousand will cause no harm as the amount of perspiration will be spread over the remaining 2 million or so glands.

Will shaving the day after application cause irritation?

No. If you applied PerspireX as instructed, there will be no problem with shaving the next day.

What about other methods of hair removal?

Most will have the same effect as shaving, because all sensitise the skin to some degree.

Are there other ways to treat problem perspiration?

Yes, other treatments include injections of Botulinum Toxin Type A (Botox), electrical therapy (Iontophoresis), certain types of drugs which affect the nerves that control sweating and, as a last resort, surgery. All have disadvantages or are expensive, and so, for the vast majority of people, Perspirex is definitely the best choice.

Isn't Perspirex expensive?

Compared with regular anti-perspirants, Perspirex may seem expensive. The protection provided by Perspirex, however,

is far longer lasting than anything else and, if used in accordance with instructions, one pack will last for three months—so Perspirex really is quite economical.
